## Abstract

- We have implemented an E-commerce Management System which primarily allows users to buy their desired products through the internet.
- This system allows the user to select from a wide range of products from a variety of sellers.

The Scripting Language used is PHP and the Database System is MySQL.

We have created all of our tables in MySQL and connected it to the user interface using PHP.

## ER Diagram:

### Relational Schema:

After converting to BCNF, the following are the tables and functional dependencies:

- 1) Admin\_login(email, contact, password)  
Email -> username, contact, password
- 2) Admin\_login1(contact, username)

- 3) Category(cat\_id, cat\_name, cat\_description, admin\_email(fk))  
Cat\_id -> cat\_name, cat\_description, admin\_email
- 4) Product(product\_id, product\_name, product\_desc, image1, image2, image3, cat\_id(fk))  
Product\_id -> product\_name, product\_desc, image1, Image2, image3, cat\_id
- 5) Cart(product\_id, custom, size, quantity)
- 6) Order(order\_id, Street, zipcode, product\_id(fk), admin\_email(fk))
